https://www.nasa.gov/topics/earth/earth_images_archive_1.html

Project Overview:

TASK: You are to create a poster that represents Earth as an Artform.

AUDIENCE: Other students

PROCEDURE:

1. Use the above websites to view different images taken from satellites.
2. Select an image.
3. Copy the image to a word document. The size of the image must cover 1/4th of the sheet of paper.
4. Next to the image, insert a map, which shows the location of the landform you selected.
5. Below the image and map, type a descriptive paragraph that must include the following:
 - a. Type of landform (Atoll, Bay, Canyon, Crater, Fjord, Glacier, Lagoon, Moraine, Oxbow lake, River, Volcano, etc.)
 - b. Size of the landform
 - c. Satellite that took the image
 - d. Type of climate (temperature and rainfall) for this area
 - e. Describe any vegetative or animal life forms native to the area.
 - f. Type of rock common to this area
 - g. Describe any water features found in the area
 - h. Describe any other important or interesting facts
6. Print out your final project. If you are printing out your project in black and white, the image must be clear and features distinguishable.

You can check the class web site to see an example of the Earth as Art Project
